

Company : Asset Eng : Mohamed Ahmed

Date : 22-4-2026

Overall :

- The entire network was inspected and confirmed to be functioning efficiently.
- It was confirmed that the internet problem that occurred earlier today was not a technical issue but rather due to an electrical problem.
- A suitable power connector was requested from Habiba.
- It was confirmed that all cameras are functioning efficiently except for one.
- This issue occurred due to IP interference because the person who initially configured the network from the white router assigned a different IP range to the devices and cameras, leading to IP interference.
- Based on this problem, and to avoid disrupting company operations, it was agreed with Habiba that we would be present at the company on a day off to perform comprehensive maintenance on the entire network and cameras to prevent any future malfunctions.
- This maintenance was scheduled for Saturday, May 2nd.

Thank you for your understanding.
